Identity Registration and Verification from the palm of your hand

Chameleon 5R is a multi-modal biometric handheld. It has all the features to register and verify identities, such as a fingerprint scanner, face capture camera and contactless card reader.

Enhanced Forensic Document Authentication

Efficiently capture identity documents utilising UV, IR, and White Light to conduct automated authenticity checks, supported by an extensive database covering virtually all global ID card security features for seamless document authentication. The advanced NFC (Near Field Communication) technology enables the reading of any identity document chip, allowing for instant individual verification, such as through fingerprint recognition.

Ultra Violet Light

White Light

Infra Red Light

Document security features light-up and are compared with a database of virtually all the identity documents in the world.

Designed for on-the-go

Chameleon 5R is rugged, lightweight, and easy to operate. It's designed for on-the-go and can operate without an internet connection. Need more than nine hours of operating time? Quickly swap the battery or charge it with the solar panel.

Accessories

Protective Case

IP67 case including powerbank, photo backdrop, thermal printer and solar panel.

Utility Holster

Adjustable and rugged nylon carry pouch with a variety of attachment options.
